## FROM LAST CLASS

---

- Distributional hypothesis: Words used in similar contexts have similar meanings (and therefore similar representations)
- We can learn word vectors from a large corpus of text using word2vec or GloVe.

# QUESTION FOR THE DAY

---

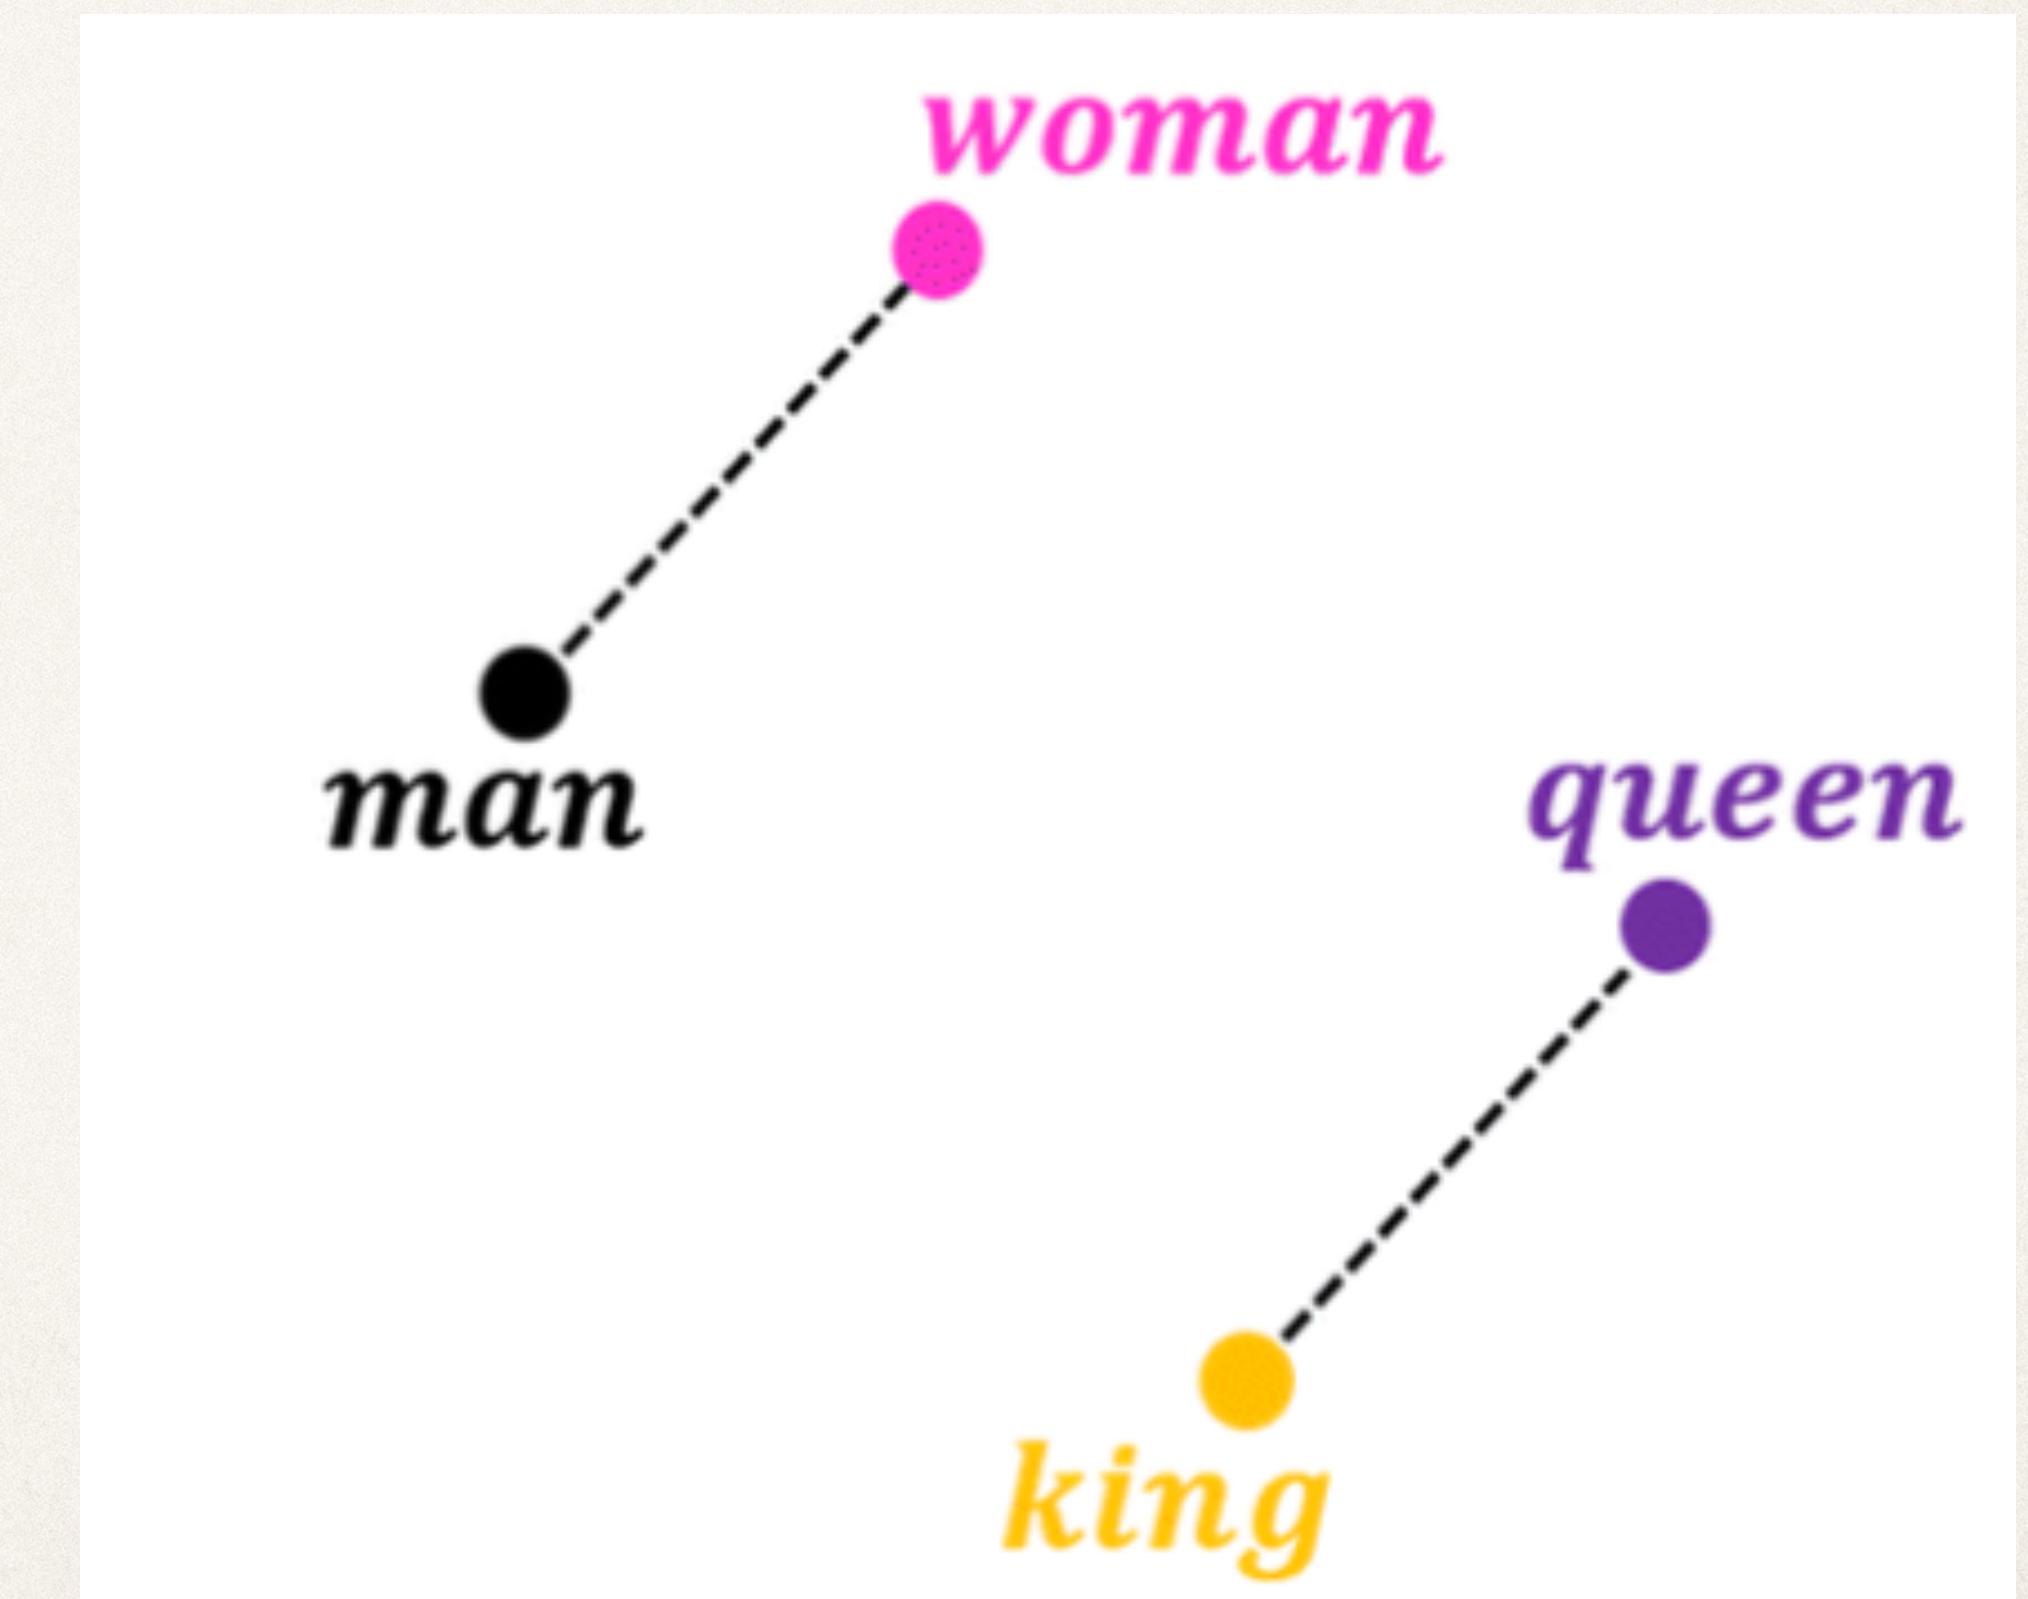

“What do word embeddings encode and what can we do with them?”

# GEOMETRY

---

man:woman::king:queen

$$v(\text{"man"}) - v(\text{"woman"}) + v(\text{"king"}) \approx v(\text{"queen"})$$

# PREDICTION

ferromagnetic – NiFe + IrMn  $\approx$  antiferromagnetic

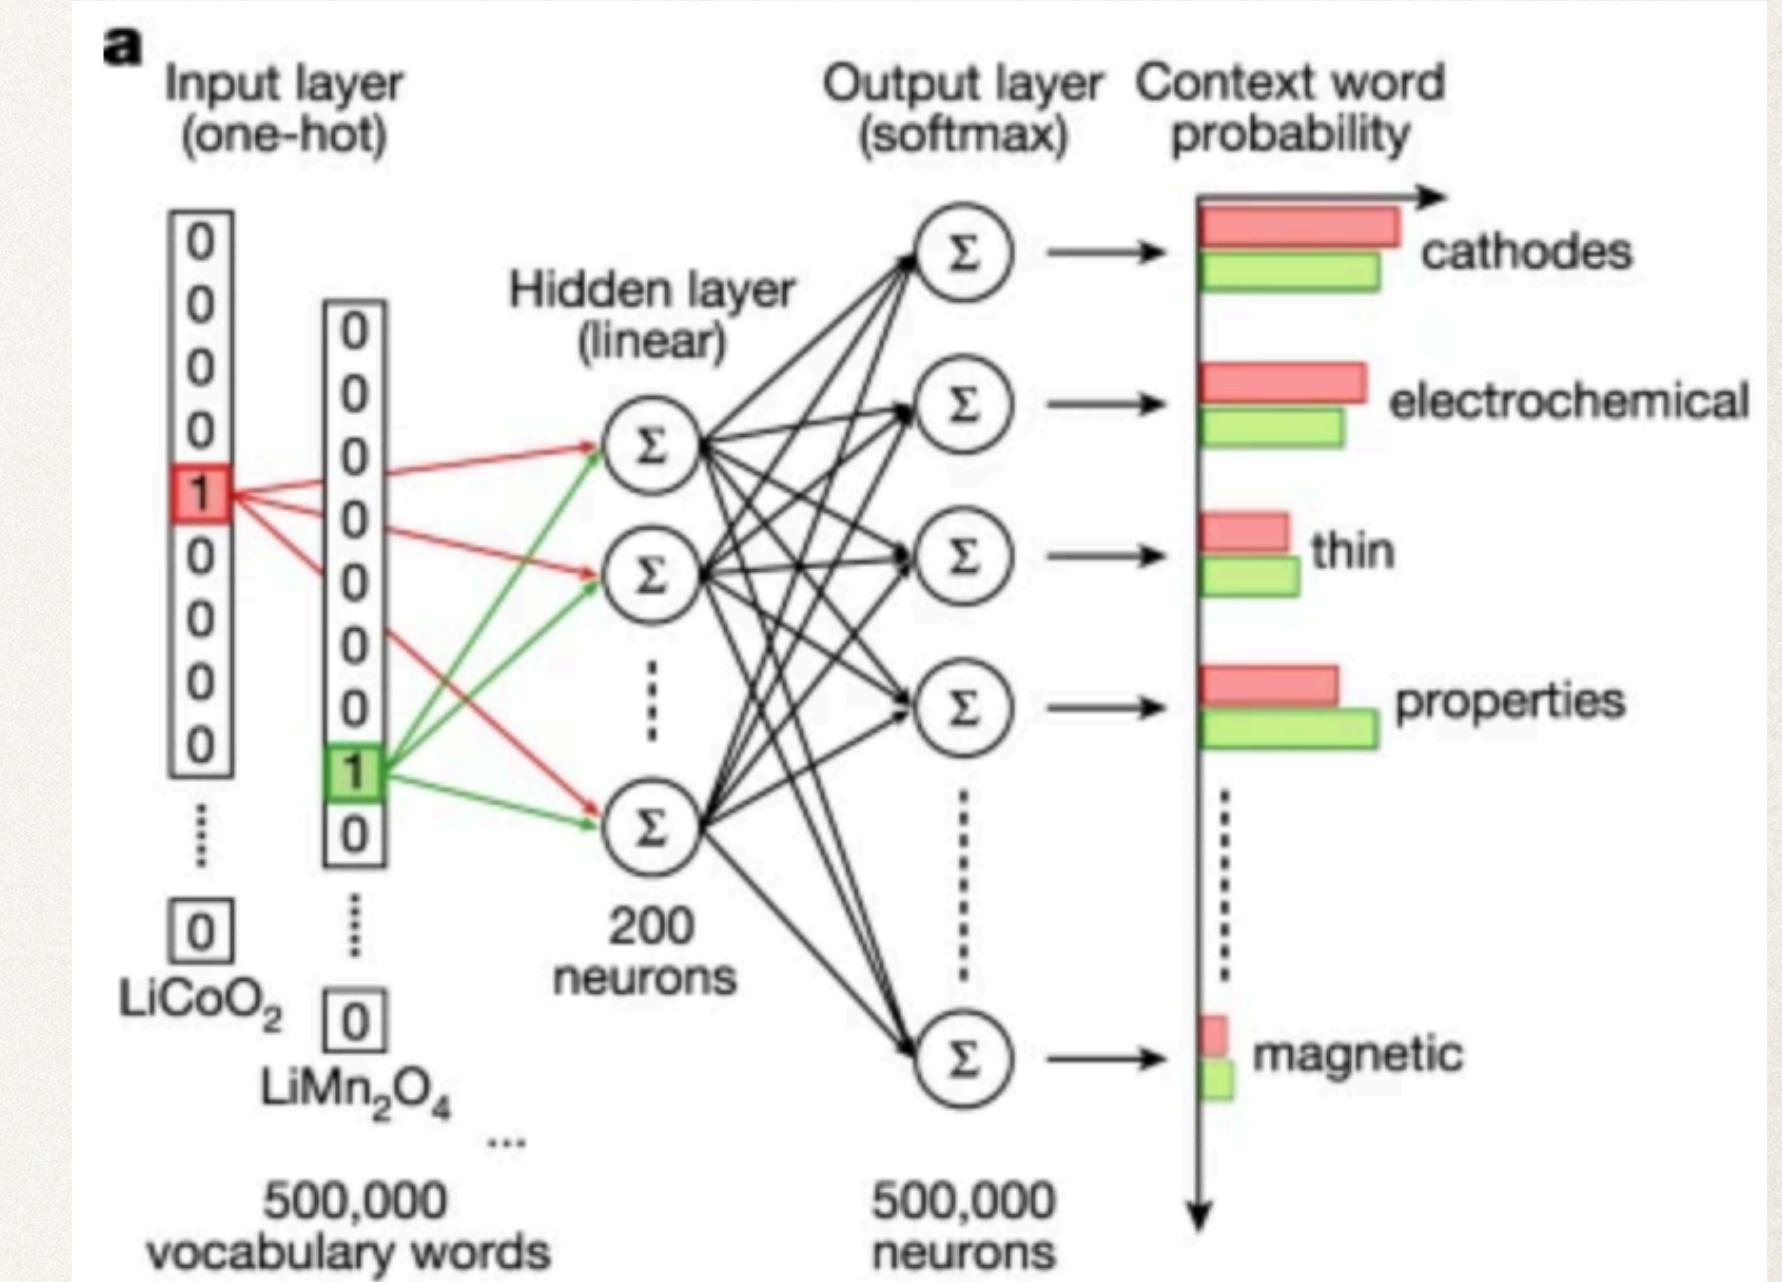

Oxides

Zr – ZrO<sub>2</sub>  $\approx$  Cr – Cr<sub>2</sub>O<sub>3</sub>  $\approx$  Ni – NiO

Structure

Zr – HCP  $\approx$  Cr – BCC  $\approx$  Ni – FCC

Embeddings can be used to construct knowledge bases  
that can lead to new discoveries

# PREDICTION

## Are Word Embedding-based Features Useful for Sarcasm Detection?

man:woman::waiter:?

waitress

okay

man:woman::doctor:?

nurse

huh

## REPORT

## COGNITIVE SCIENCE

# Semantics derived automatically from language corpora contain human-like biases

Aylin Caliskan,<sup>1,\*</sup> Joanna J. Bryson,<sup>1,2,\*</sup> Arvind Narayanan<sup>1\*</sup>

Machine learning is a means to derive artificial intelligence by discovering patterns in existing data. Here, we show that applying machine learning to ordinary human language results in human-like semantic biases. We replicated a spectrum of known biases, as measured by the Implicit Association Test, using a widely used, purely statistical machine-learning model trained on a standard corpus of text from the World Wide Web. Our results indicate that text corpora contain recoverable and accurate imprints of our historic biases, whether morally neutral as toward insects or flowers, problematic as toward race or gender, or even simply veridical, reflecting the status quo distribution of gender with respect to careers or first names. Our methods hold promise for identifying and addressing sources of bias in culture, including technology.

# CHANGE AND VARIATION

---

- Since language is situational, one can learn embeddings that depend on time, geography or other social contexts
